

HIGH ALTITUDE REVEGETATION

20th HIGH ALTITUDE REVEGETATION WORKSHOP

March 6-8, 2012

Colorado State University

Call For Abstracts

You are cordially invited to contribute an oral presentation or poster at the Twentieth High Altitude Revegetation Workshop to be held March 6-8, 2012, at Colorado State University's Lory Student Center in Fort Collins, Colorado. This conference is a continuation of the Workshop series that began in 1974. For nearly forty years, interested people from the environmental restoration industry, academia and regulatory agencies have gathered every other year to learn about new techniques, products and methods for solving revegetation and restoration problems.

The High Altitude Revegetation Committee, through Colorado State University, conducts biennial workshops and annual field tours to promote understanding of reclamation and revegetation techniques and problems that occur when fragile high-elevation ecosystems are modified by human activities or natural events. This information is valuable for rehabilitating disturbances at all elevations.

The High Altitude Revegetation Committee is seeking presentation and poster abstracts for the twentieth workshop. If you would like to volunteer a presentation, please email a title, contact information and draft abstract by October 21st, 2011 to Joe Brummer at: joe.brummer@colostate.edu. Selected presenters will have their abstracts published in the workshop proceedings and have the option of submitting a paper for inclusion in the proceedings. The theme of the 20th HAR Workshop is the relationship between revegetation and climate. Abstracts dealing with this theme are particularly encouraged. We also seek presentations on any aspect of slope stabilization, revegetation, and restoration in high altitude environments.

Additional information regarding the 20th High Altitude Revegetation Workshop can be found at:
